

ABSTRACT OF THE DISCLOSURE

A device and method for the storage and retrieval of a variety of cooking utensils is disclosed. The invention may include a sleeve, can or tracking system that is capable of receiving and storing and dispensing a stand alone appliance, or a kitchen utensil that is to be used on another kitchen appliance such as a stovetop/hob. The device may also include a latching system for securing the appliance/appliance carrier or utensil in its stored position. The device may be used with existing appliances and utensils as an appliance/utensil carrier or incorporate its own proprietary appliance(s) or utensil(s). This new and novel product or system for the storage and retrieval of food preparation appliances, allows the workplace to remain uncluttered, and at the same time allows the user ready access to the appliances, devices or utensils when desired. Additionally, the appliances are stored in a more efficient manner than is currently available.
